Response to Reviewer 2 Comments

**Point 1:** The authors present a paper on concrete filled steel tubes. The theme presented is interesting and very topical. The work in general is well organized. The planning is correct and the analysis and interpretation of results is coherent and well structured. The conclusions presented are based on the results obtained but could be more assertive and present limit or target values or trends. In my opinion this work can be considered for publication.

**Response 1:** Thanks for your comments and suggestions, I will make improvements based on your suggestions in the next work.
