

Reviewer 1:

The reviewer reevaluated the manuscript entitled "Sheet Barrier and Intubating Stylet" by Tsai et al. First, the reviewer respects the authors' perseverance and professionalism, time and effort spent on this revision. The manuscript seems to be improved in terms of its scientific value and readability through this revision.

My remaining comments are all about minor points:

Q 1: The left panel of Figure 1, Figure 3A "Samsung Triple camera 2021" This capture description is unnecessary and should be deleted.

A 1: The watermark of "Samsung Triple camera 2021" in both the Figure 1 and Figure 3 have been obscured and masked. Thank you!

Q 2: Page 4. Section 3. Tracheal Intubation during the COVID-19 Pandemic. 2nd para "The airway manager is able to obtain a view of the patient's airway and guide the ETT through the patient's glottis without placing <his> face in close proximity to the patient's airway (Figure 4B)." "His face" should be "his or her" face.

A 2: "his face" has been corrected to "his or her face". Thank you!

Q 3: Keep abbreviations to a minimum. Please do not use abbreviations unless they appear at least three times in the text. The example includes LMA and GA.

A 3: The abbreviations such as "LMA", "GA", "ET" in Table 1 have been deleted. Instead, "laryngeal mask airway", "general anesthesia", and "endotracheal tube" have been spelled out in the Table 1. Thank you!

Q 4: Table 1, CRNA. This abbreviation is used without definition. Please spell out and delete CRNA.

A 4: "CRNA" has been replaced with "certified registered nurse anesthetists". Thank you!

Q 5: Reference 63. Two papers, Cooney et al and Kok et al are mistakenly combined.

A 5: References 63 and 64 have been separated and sequenced accordingly. Thank you!

Reviewer 2:

My previous comments and questions have been answered. The entry can be published in present form in my own opinion.

A: Thanks for your excellent and professional review and comments.
