Response to the Editor and Reviewers' comments

Coatings

"Non-polar gallium nitride for photodetection applications: A systematic review"

Dear Editor and Reviewers,

Thank you for your useful comments and suggestion on the structure and scientific content of our manuscript. We have modified the manuscript accordingly, and detailed correction listed below point by point:

Reviewer 2

The authors did a good job putting together a comprehensive review article on Nonpolar GaN for photodetector applications. The methodology of screening and choosing the literature outlined in the review article is especially important and useful for researchers interested in undertaking systematic review of related material. The results of the systematic review have been comprehensively written and the structure of the paper is sound and well organized. I recommend that this review article be published in Coatings pending requirements set by the other reviewer as well as the editor. The paper needs a minor run through of language usage i.e. Spelling and grammar check.

Action/Amendment: Thank you for the comment. The comment has been addressed and the language usage, spelling and grammar mistakes have been corrected throughout the whole manuscript.
