

Reviewer 2		Line
Line 41, “log P: 3,5” should be “log P 3.5”. Line 91 “Na2EDTA” should be “Na2EDTA”	Done.	
The EtOH-1 and EtOH-2 treatments are too vague, it would be better adding the actual concentration for EtOH treatments, like EtOH-0.8mM, EtOH-2.4mM.	The nomenclature of the treatments is appropriate for this type of research.	
Table 1, all conditions should have the concentrations of the elicitors indicated.	Done.	
Figure 2 will need more explanation with the results. What does the highest volume means and how does that correlated to the production of toxoids.	Done.	The greater the volume, the greater the production of taxoids, due to the concentration of the elicitor.
Session 3.3 Biomass accumulation, only the EtOH-2 treatment and the control have their data presented. Data from other conditions will be needed and the results will need to be explained in a little bit detail.	Done.	The results demonstrate and corroborate the hypothesis that elicitors increased taxoid production.
Table 2, in the subtitle, “his section may be divided by subheadings. It should provide a concise and precise description of the experimental results, their interpretation, as well as the experimental conclusions that can be drawn”?	Done. Sentence deleted.	
Line 369, “his section is not mandatory but can be added to the manuscript if the discussion is unusually long or complex.”?	Done. Sentence deleted.
