Dear authors,

I think the title is long. To attract readers, I recommend restructuring it to a more concise one.

> Thank you very much for your comments. Now title is
"Integrated Analysis of Tissue-specific Gene Expression in Diabetes by Tensor Decomposition Can Identify Possible Associated Diseases."

There is a minor typing mistake in line 160.

> *Thank you very much for your comments. Line 169 is reference and this is formatted by MDPI-provided style file and the content is gotten from data base. It will be corrected in a final printed version.*

Additionally, the table and figure captions should present more details. For instance, this is the caption of table 1: "Table 1. G(2, 1, 2, 1, 1, ℓ6)". Could you describe it better? Also, could you explain better figure 1's caption?

>Thank you very much for your comments. We added more captions.

Furthermore, I think you should have given more focus on the results and the implication for the problem solution.

>Thank you very much for your comments. In order to strengthen the results, we added the analysis using comBat.
