Title: Dynamic tensile behavior of woven C/SiC composite: experiments and strain-rate-dependent yield criterion

Authors: Jingwei Yu , Peiwei Zhang * , Qiang Chen , Qingguo Fei *

The paper is very interesting and well written as well explained. However, some aspects must be improved to be accepted to be published.

Comment #1:

Experiments

The process of the manufacture of the materials are not well explained. Please include pictures of the process and the properties of each raw material and the final C/SiC composites must be given.

Comment #2:

Figure 2c)

Figure of the strain gauge is not perceptible. Please include a Test sample as Figure 2b) with the strain gauge.

Comment #3:

Figure 4

Please explain each layer of Figure 4. It is not explained the difference between a,b,c and e,f,g

Conclusions:

Quantitatively analysis must be given and not only qualitatively.

Future improved work must be given.
