

Response to Reviewer 3 Comments

This is an interesting Review, that collects and presents composting processes for solid waste management. The interested reader finds information about the different aspects and problems of composting.

Response:

All authors are thankful for your positive review and comments; After analyzing your comments and the manuscript, all the said changes are made with the permission of all co-authors. The general description of your comments are as given below:

Point 1: The topic is clearly discussed. However, Tables may be improved. For example, Table 1 is very difficult to read. Probably it is better to insert it in a horizontal rather than vertical layout

Response: As per reviewer suggestion, all the tables are converted from the horizontal layout to vertical. Authors also improved the data and contents presented in the tables from Table 1-8.

Point 2: *Attention!* In Figure 2 (center, above) it is written "Green (Grass, food **scarps**, manures)" According to English Dictionary, scarp = a steep slope or cliff formed by folded or eroded layers of rock. Of course, this is not the case here.

Maybe it was misspelled instead of "scraps"

Response: Thank you for your deep analysis and this comment. It was a typo mistake. After your comment, the changes are made in figure 2.
