

Article: A roadmap for the design, operation and monitoring of renewable energy communities in Italy

In this paper, the authors present a roadmap for the design, operation and monitoring of renewable energy communities in Italy.

Abstract

The abstract is structured according to the Instructions of the journal.

Introduction

The Introduction section needs to be improved. The authors should highlight the main conclusions and contributions of the research at the end of this section. Furthermore, the authors can add a final paragraph for summarising the content of the next sections.

Material and Methods

The authors well describe the Materials and Methods section.

Results

The results are highlighted and discussed in detail.

Conclusions

In general, the objective, the main results and discussions, contributions, and limitations should be mentioned in this section. However, this paper does not present the contributions and limitations of the study, and only summarizes the results in the Conclusion. Therefore, it is recommended that the author strengthen it, pointing out the scientific contributions and limitations of the study. Furthermore, it is essential that the authors point out the research opportunities that may have arisen from this study.

References

References cited – Please, correctly cite all citations in the text when the author's name is cited in the text, for example in line 90:

Stentati et al. proposed an optimization model to compute the battery charging/discharging policies while selling points of flexible loads and controllable generators for a REC in the Italian incentive systems [13].

Change to:

Stentati et al. [13] proposed an optimization model to compute the battery charging/discharging policies while selling points of flexible loads and controllable generators for a REC in the Italian incentive systems.
