The article entitled "**Treatment of Dyeing Wastewater using Foam Separation: Optimization Studies**" is written well, the authors have cited systematic literature studies However some major revision are needed.

1. Abstract section: The key words should be arranged in alphabetical order.
2. Introduction: There are numerous grammatical mistakes. This section should be revised.
3. A little description about dyes and their effects on ecosystem (aquatic plants and animals) is needed. You can follow and take ideas from latest articles published; https://doi.org/10.3390/ijerph19169962, https://doi.org/10.3390/w14132063
4. Table 1, 2 and 3: The font size of the contents should be checked.
5. The structure of ethylene blue (Figure) should be included in manuscript.
6. There are no standard deviations (SD) values in results. Why?
7. Discussion: The discussion section is weak. The results should be discussed and compared with previous literature study.
8. Conclusions: It should be revised and arranged in the form of paragraph. The bullets should be removed.
9. References: Arrange and recheck the references according to journal format.
10. The author should check plagiarism after revision before submission of revise manuscript.
11. The manuscript should be revised carefully. There are some minor grammatical mistakes throughout the manuscript.
