Reviewer 2

1. The four arguments from line 253 to line 265 are essential for this manuscript. I suggest the author double-check for spelling and other errors before submitting. What does it mean by "Apparently, ……" in line 264?
   Response 1: This has been corrected and revised as suggested. Please refer to p.4, lines 138-157, "We assume … or $\lambda=\sum_{i=1}^{\infty}\lambda_i$".

2. The authors should provide a reasonable analysis of why their method can outperform other methods. Experimentation is important, but it is not enough to make their point.
   Response 2: Responding to reviewer feedback, we've included an evaluation of our method's merits over others. Refer to p.5, lines 193-212, "Poisson distribution ... DDoS attack".
