## Response to Reviewer 3 Comments

Point 1: Figure 1. Diagram 1a) indicates each part of the system used by numbering and the name of the component. Diagram 1b) no longer contains the numbering. It only has the names of the components. It is suggested to add the numbering for a better understanding. Also, point out the component that is differentiating the contrasted system and the experimental one.

**Response 1:** All the parts of Figure 1a and Figure 1b have been properly numbered with a name of the component. In experimental column (Figure 1b), the component no. 9 (inverted funnel) is an additional part as compared to 8 parts in the contrasted column (Figure 1a).

Point 2: The references used must be updated, more recently references might be used, since the last 5 years until now . In the document there are only 6 references within this range:

Line 714

Line 725

Line 733

Line 736

Line 793

Line 800

**Response 2:** 18 references from the last 5 years have been added in place of old references.
