Comments and Suggestions for Authors

Comments and Suggestions for Authors

Unfortunately, my comments have not been addressed:

- The characteristics of current research should be highlighted in the comparative table of literature review from both aspects of theoretical and application. In other words, a comprehensive literature review as well as research gaps should be summarized in the comparative table.

Thank you very much for your suggestion. We have add highlighted of the comparative studies in table (see in green colour in previous studies chapter)

- Generally, real data are tainted by uncertainty. The authors should discuss the proposed approach under data uncertainty.

Thank you very much for your advice and suggestion. We have add discussion in the methodology to addressing your suggestions (in green colour)

- The authors should compare their results and proposed approach with popular approaches in literature.

Thank you very much, we have add more explanation in the page 16, paragraph 3 (green colour)

Comments on the Quality of English Language

Minor editing of English language required.

Thank you very much. We have revise some of the error of type, grammar and phrase.
