46-47	Please clarify if you are describing only leaves or leaves and stems. Because you mentioned pruning and I believe pruning include also stems.
83	After 30 ?
91	Define the size of small pieces.
95	Define room temperature
110	Crushed? Do you mean grinding? Please provide the size
117	Describe the diet of the cpws and provide the ethical permission of using animals
123	Werecompleted change to were completed
Tables	All tables need to be improved. To be better presented. Some of the numbers are overlapping.
216-218	Litchi leaves are poor in CP compared to alfalfa. This statement is relevant to the discussion. Your product might be defined as haylage and silage according to the pH values and DM.
225-258	Ruminants utilize N-NH ₃ in the rumen. Please omit this statement.
271	"it might prefer rapidly degradable DM fractions" not clear statement. Please re-write to be better understood.
273-275	"On the one hand, Gas production means that nutrients in silage are not well absorbed by ruminants, on the other hand, The main components of gas production were H ₂ , CO ₂ , and CH ₄ ". Not clear
273-280	This is not related to in vivo. You did comparative in vitro gas production. Gas production is parallel to your IVDMD parameters. Please either omit or try to rephrase to fit your application.
281-286	Omit this
