

Line 11: This paper should be included: Annunziato F, Romagnani C, Romagnani S. The 3 major types of innate and adaptive cell-mediated effector immunity. *J Allergy Clin Immunol*. 2015 Mar;135(3):626-35. doi: 10.1016/j.jaci.2014.11.001. PMID: 25528359.

In the introduction, the authors list what are the risk factors for CD and ACD, maybe it would be worth enumerating here the occurrence of metal hypersensitivity and implanted devices (knee, dental etc) PMID: 36498546, and not only skin exposures.

This a very good article, however, the figures are very hard to understand. I suggest working on those. The manuscript would benefit. There is much text, and good figures would be helpful. e.g. Fig2. All abbreviations used on the figure should be explained, here we miss a lot: LC, IL, Th, TNF....

What is this?

This line suggests lymph node?

What is the difference between these arrows?
