Anwer to Review 1

Thank you for conducting the review and in-depth analysis of our work. We took into account the suggestions in the indicated places of our work:

Remark	Replay
It is highly recommended to add the part of the influence of the preservation processes on the anthocyanin content of the cornelian cherries.	Initially, we had such a chapter in the work, but it was a repetition of information found in the chapter: 7.1. Anthocyanins in food products derived from cornelian cherry. See present Line: 361
Since it is a word about review the brief content at the beginning of the text would be very useful.	This was emphasized in the abstract of the work, See present Line: 16-18
In the conclusion part the more interesting and useful fact should be emphasized. Currently it is very simple with general information.	We have slightly changed the conclusions following your suggestion. We have tried to include the most interesting and useful information resulting from the literature we have collected. Se present Line: 585
Minor editing of English language required.	The work was read and several linguistic corrections were made
