Dear Reviewer,

We really appreciate your interest in improving this work. So, thank you so much for your comments and suggestions. Based on your comments/suggestions, we have distributed them with their corresponding responses as follows:

Point 1. Rewrite in a simpler way sentences such as: “In this paper, we address the problem of understanding the multiple interactions between population increase and drivers and pressure factors to identify those interactions causing damage to human-nature interactions, which in turn affect the environment quality.”

Response 1: You can verify that the new abstract has been rewritten using shorter sentences. The mentioned sentence has been replaced by the following pair of sentences: “Multiple interactions between population increase, as driving force, and pressure factors can cause damage to human-nature interactions. In this work, we aim to identify, understand, and assess those interactions exerting effects on the environment quality”. In this way, we have avoided to write long sentences that could be confused to be interpreted.

Point 2: Line 19: needs to be more precise what type of effect: “actions to reduce effects on the environment”.

Response 2: Please, see the new abstract, lines 22 and 23, where we have specified in more detailed what type of effects can be reduced.

Point 3: The abstract needs another revise, as the connection of sentences are missing or in some cases misleading.

Response 3: We have rewritten a new abstract, taking care of the connections between sentences and trying to write shorter sentences. Please, see the new abstract.

Point 4: Line 38: it is better to start with more general sentence first (as a background) and then start referencing to authors.

Response 4: Based on your comment, we have changed the order to make citations. An important number of citations has changed the place where they were located. We have colored, throughout the manuscript, the texts where the place of citations has been changed with yellow shadow.

Point 5: About the rest of manuscript the revisions and added sections improved the clarity of the manuscript, however the English writing and style needs to be revised (long sentences, misuse of punctuation marks, complex sentence structure). It is better to use more simple and shorter sentences to help reader follow the manuscript easily.

Response 5: The long sentences, throughout the manuscript, were distributed in two parts. In this way, we have avoided making long sentences. In addition, we have avoided a lot of marks of punctuation such as; “,”, “•”, etc. The sentences that have been transformed, throughout the manuscript, can be identified because the first part has been colored with blue shadow. Meanwhile, the second part of the sentence has been colored with gray shadow. For instance, see lines 53, 54; lines 58,59; lines 76 to 78; lines 80 to 82; etc.

Sincerely,

Fernando Ramos-Quintana
