

“Four-Week High-Intensity Interval Training Improves 2000-m Rowing Performance and Tensiomyographic Mechanical Properties in Rowers”

In version 2 of the manuscript

Reference chapter:

Unfortunately, I could not help, it was observed that no corrections have been applied, despite the authors' assertion that they have reviewed the references. The DOIs remain unchanged, and the revised text appears identical to the original. Inconsistencies are still present in the references.

Kindly update references 19, 21, 22, 23, 25, and 27 as needed (sadly, and even after being warned of the fact, the DOIs remain unchanged). In addition, please ensure that the title of reference 24 is accurate and properly written. For your convenience, I am also providing the correct title and DOI reference to assist the authors: “García-Manso, J.M.; Rodríguez-Ruiz, D.; Rodríguez-Matoso, D.; de Saa, Y.; Sarmiento, S.; Quiroga, M. Assessment of muscle fatigue after an ultra-endurance triathlon using tensiomyography (TMG). *J Sports Sci.* 2011, 29(6), 619-25. <https://doi.org/10.1080/02640414.2010.548822>”

Once again, ensure that all references include the standard DOI prefix format consistently throughout the whole reference section.
