

Review

A Robust Early Warning System for Preventing Flash Floods in Mountainous Area in Vietnam

Dear authors

I read carefully your article and found some errors of the article.

Line 61 Here is the first citation in the article with the order number [26]. Being the first citation in the text, it will be numbered with [1], and the remaining citations need to be further counted with 2, 3, 29 (29 citations are referenced). Please modify the number system of bibliographic titles quoted in the article as requested by this journal!

Line 89 I recommend the replacement of the term solid articles with debris.

Be careful! The purpose of this research is not clearly stated in the introductory part.

Line 121 What is the importance of who lives in the studied area, I think other geographic features are more relevant to the hydrological forecast.

Nothing is said about land use in the introductory part.

Line 123 Figure 1 - Mathematical coordinates are missing from the map.

Line 141 Figure 2 We noticed the numbering of the figures with a and b, but the border of the text is exceeded on the right side of the image. Please rearrange the figure on the page.

Line 199 Fill in the text as follows: "... the model is (Eq.1):"

Line 226 $w_i \dots x_i$!!!!

Line 228 To complete the text as follows: "... as equivalent (Eq.3):"

Caution: Figures 5 and 6 will be numbered from left to right (Figure 5 and Figure 6)

Figure 9 Increase the resolution of the figures presented and switch to the English version in order for them to be understood by the general public.

Note: The figure is placed after it has been quoted in the text (Line 293 Figure 9 and line 298 citations in the text and this figure).

In view of the conclusions presented, should it be mentioned in the introductory part the hydrological forecasts as an objective of the research?

Article Title A Robust Early Warning System for Flood Prevention in Vietnamese Mountains leads to the idea of hydrological forecasting.

Thank you for taking your previous suggestions into consideration.

All the best,

Daniel
