Response to Reviewer 1 Comments

Point:
This is a very good manuscript that is easy to read, follow, and understand. The authors are encouraged to add more background references in the introduction as the literature surveyed is a bit sparse. The authors are also recommended to change the color scheme in Figures 5, 6 to remove/replace the light blue which is difficult to see on the screen. The manuscript should be considered acceptable for publication once the authors address these minor concerns and go through further proofreading for typos, etc.

Response: We thank the reviewer 1 for his/her careful reading of our manuscript and commenting the important issues. We modified English in our manuscript, and we replace the light blue in Figure 5, 6 to dark green.
