Response to the reviewers

Many thanks for reviews’ careful and hard work. According to their valuable revision suggestion the authors have revised this manuscript as follows:

1. The correctness of the mathematical notation is still not maintained. All entries of type \( i=1\cdots n \) should be written in the form: \( i=1, \ldots, n \) (1 comma, ellipsis, comma n).

   In order to solve this problem, the authors have checked and revised the similar formulas in the full text, and make sure that each formula is written in accordance with the norms, which could be seen in the revised version in details.

2. The Authors still do not show the precursors of the methods cited, e.g. formula (4) is Shannon’s entropy [1].

   Aiming to this piece of revision suggestion, the authors have quoted the origin of formula quoted. The revised contents have been marked in red bold seen in the revised version in details.
