Response to Reviewer#1

This work is about AKI and ECMO use in the pediatric patients. It is very good for us to understand the incidence of AKI and the influence on mortality. This work let the readers know AKI is common following ECMO in pediatric patients with a 193 incidence of 68%. Up to 40% of pediatric patients who are on ECMO will eventually need RRT.

Response: We thank you for reviewing our manuscript and for your critical evaluation. We appreciated your nice comments regarding importance of findings from our study. We are confident that this manuscript will help future research on AKI in pediatric/neonatal patients requiring ECMO.
