Reviewer 1:

Comments and Suggestions for Authors:

1. Check English grammar (For example, line 29, electronic devices is identify: this sentence is wrong).

   We rewrote some parts and corrected the grammar marked in blue color. We planned a final proofreading review by an English native before publication.

2. The manuscript design is nice and clear I would need more information on the conclusion sections after all this work that has been done, not very clear and round.

   Many thanks to the reviewer for this comment. We rewrote the conclusion to include more information and to discuss more details.

   And we modified the description of the results at different places to be adequately understandable.
